Mayo Clinic invites Operations Researchers and Health Services Researchers to apply for an immediately available position in the Division of Health Care Policy & Research (HCPR). HCPR is a multidisciplinary group of health services researchers with training in economics, biostatistics, informatics, and institutional analysis.

The mission of HCPR is to conduct health services, economic, and operations research in support of the practice, research, and education missions of Mayo Clinic. The advertised position requires the ability to function as a member of a multidisciplinary research team and to provide consultative support to senior leadership.

Candidates must have demonstrated expertise in the field of operations research (OR). Experience in some of the following areas is desirable: forecasting, scheduling algorithms, statistical analysis, simulation, network optimization, and project management methods. Candidates for a senior level position should have some knowledge and experience in improved integrated operational planning and control systems including service applications of Just-In-Time, Theory of Constraints, lean operations, and other contemporary operational strategies. Effective communication skills are essential.

Candidates should have earned a doctoral degree in operations research or health services research with a strong background in applied operations analysis. Candidates should have a demonstrated record of scholarship evidenced by high-quality multidisciplinary health services research. The person appointed to this position shall have opportunities to pursue his/her research agenda.

Extensive knowledge of the U.S. health care system is necessary. Ability to obtain external funding is a significant strength, although this position does not require external support.

__Mayo Foundation is an affirmative action and equal opportunity educator and employer. Post offer/pre-employment drug screening is required.__
Management Science is a scholarly journal that publishes scientific research into the problems, interests, and concerns of managers. Our scope includes articles that address management issues with tools from traditional fields such as operations research, mathematics, statistics, industrial engineering, psychology, sociology, and political science, as well as cross-functional, multidisciplinary research that reflects the diversity of the management science professions.

We also publish relevant articles and seek to stimulate research in emerging domains, such as those created by economic globalization, public policy shifts, technological improvements, and trends in management practice.

For additional information, please visit our website: http://mansci.pubs.informs.org.
A premier journal of innovative research into the science of management.

Editorial Statement

Management Science is a scholarly journal that publishes scientific research into the problems, interests, and concerns of managers. Our scope includes articles that address management issues with tools from traditional fields such as operations research, mathematics, statistics, industrial engineering, psychology, sociology, and political science as well as cross-functional, multidisciplinary research that reflects the diversity of the management science professions. We also publish relevant articles and seek to stimulate research in emerging domains, such as those created by economic globalization, public policy shifts, technological improvements, and trends in management practice.

Submissions

All papers for consideration by Management Science should be submitted electronically at informs.manuscriptcentral.com. Authors without Internet access should contact the managing editor to make alternate submission arrangements.

Within the electronic system, submissions should be directed to the appropriate department editor or to the editor-in-chief. Department editors are listed on pages ii and iii, along with their associate editors.

The following are Management Science submission requirements:

- papers not more than 32 pages, including all tables, graphs, references, and appendices;
- 11-point font with one-inch margins on all four sides;
- double-spacing throughout, including abstract, references and footnotes;
- a nonmathematical abstract of not more than 200 words that communicates the contribution of the paper to general readers as clearly as possible;
- references listed alphabetically by author at the end of the paper in conformance with journal style. In-text citations should be indicated by the author’s last name and year of publication, e.g., (Norman 1977) or Norman (1977);
- a list of five potential referees, including area of expertise, title, full mailing address, phone, fax, and e-mail. These suggested referees should not have a conflict of interest with the author(s).
- An author has a conflict of interest with:
  - (a) his/her major professor or a student for whom the author served as a major professor,
  - (b) people working at the same institution, (c) co-authors on work completed or in progress during the last four years.

When a paper is accepted for publication, authors must provide a hard copy of the final version plus an electronic version in Word, WordPerfect, or TeX.

Abridged Statement of Editorial Policies

Management Science seeks to publish articles that identify, extend, or unify scientific knowledge pertaining to management. Scientific paradigms can be drawn from a broad range of disciplines, as reflected by the departmental structure of the journal. However, the unifying thread of all Management Science articles is a fundamental focus on improving our understanding of the practice of management. Within this scope, theoretical, empirical, prescriptive and descriptive contributions are welcome. In addition to managerial relevance, articles must meet high standards of originality and rigor. More detailed descriptions of editorial objectives are given in the editorial statements of the individual departments. Authors seeking up-to-date information about specific department editorial objectives should send their requests to the appropriate department editor or to the editor-in-chief.

Clear exposition is an important criterion for publication in Management Science. Articles must be readable, well organized, and exhibit good writing style. As much as possible, papers suitable for Management Science should be readable by those comfortable with undergraduate mathematics. We accept the use of graduate-level mathematics only if it is essential for understanding. All articles and notes, if judged potentially suitable for Management Science, will be refereed by at least two external referees.

The submission of a paper to Management Science for refereeing means that the author certifies the manuscript is not copyrighted; nor has it been accepted for publication (or published) by any refereed journal; nor is it being refereed elsewhere.

As a rule, Management Science does not invite submissions of rejected manuscripts. However, in exceptional cases (e.g., an overt error was made in the review process or the analysis has been so significantly improved as to constitute an entirely new paper), we will consider them. If a submitted manuscript is based on a paper previously rejected by Management Science, it is the responsibility of the author(s) to reveal this and to state clearly why rejection was justified. Failure to do this may be grounds for rejection.

As a condition of final acceptance of a paper for publication in Management Science, the author(s) must indicate if their paper is posted on a working paper website, other than their own. They are responsible for assuring that, if any part of the paper has been copyrighted for prepublication as a working paper, the copyright can and will be transferred to INFORMS when the paper has been accepted. This includes both print and electronic forms of the paper. Authors may post their working papers on websites after acceptance and prior to publication, as long as the sites are not copyrighted or do not serve as formal depositories.

If the paper (or any version of it) has appeared, or will appear in a nonrefereed publication, the details of such publication must be made known to the editor-in-chief at the time of submission, so that the suitability of the paper for Management Science can be assessed. Management Science requires that at least one of the authors of each accepted article sign a Copyright Transfer Agreement form. For further information write: Professor Wallace J. Hopp, Northwestern University, Department of Industrial Engineering and Management Sciences, Evanston, IL 60208-3119.

Permissions

Permission to make digital/hard copy of part or all of this work for personal or classroom use is granted without fee provided that copies are not made or distributed for profit or commercial advantage, the copyright notice, the title of the publication and its date appear, and notice is given that copying is by permission of the Institute for Operations Research and the Management Sciences (INFORMS). Distribution through servers or Redistribution to lists requires specific permission and, in some cases, a fee. Address requests regarding reprint permission to the Institute for Operations Research and the Management Sciences, 7240 Parkway Drive, Suite 310, Hanover, MD 21076, permissions@informs.org. To copy otherwise is permitted, provided that a per-copy fee is paid through the Copyright Clearance Center, 222 Rosewood Drive, Danvers, MA 01923, www.copyright.com.

Subscription Services

Management Science (ISSN 0025-1909) is a monthly journal published by the Institute for Operations Research and the Management Sciences at 7240 Parkway Drive, Suite 310, Hanover, MD 21076 (INFORMS). Subscription prices per volume, print and online: Institutions—$565, members—$104, nonmembers—$208, students and retired members—$52. Additional subscription options and rates are available online at www.informs.org/Pubs. Periodicals postage paid at Hanover, Maryland, and at additional mailing offices.

POSTMASTER: Send address changes to Management Science, INFORMS, 7240 Parkway Drive, Suite 310, Hanover, MD 21076.

Direct inquiries about reprints, bulk rates, and single copies, as well as correspondence (subscriptions, membership dues, change of address) to: INFORMS, 7240 Parkway Drive, Suite 310, Hanover, MD 21076, www.informs.org, informs@informs.org.
