## *Preface*

Recently, the application of Information and Communication Technology (ICT) has taken important role in agricultural sector for sustainable management, planning including learning process. Also, ICT has been a key to efficient information utilization in order to increase competitiveness of agricultural products.

This year is a very good year that the second World Congress of Computers in Agriculture and Natural Resources and the fourth Asian Federation of Information Technology in Agriculture have joined together. Moreover, Thailand as one of an agricultural country, is honorably selected to be the host of such significant event.

The AFITA/WCCA 2004 conference provides forums for agricultural related professionals to exchange information and experience in applications and developments in the use of ICT. The contributions from various countries will allow a broadened perspective for all attendees and to promote wide range of the use of ICT in agriculture and natural resources.

Finally, on behalf of the organizing committee, I hope that this conference will be a step towards collaborative efforts to bring digital opportunity to all contributors.
