Post-Disaster Reconstruction in Medellin Informal
Settlements and the Associated Resilience Dimensions
of Place-remaking

Diana Marcela Benjumea Mejia

Thesis submitted to the Department of Architecture and Built Environment of The
University of Nottingham for the Degree of Doctor of Philosophy

March 2019

Abstract

In urban planning research, studies that investigate the process of reconstruction after natural disasters in Latin American countries, and the set of resilience coping strategies organically developed by residents of these areas, are very limited. In Colombia, for instance, the lack of understanding on how these communities have reshaped the built environment through grassroots actions has amplified the gaps between the historical development of urban slums and the principles for the latest top-down participatory urban developmental strategies. In response, this thesis aims to reveal the process of development of an informal settlement, Villatina located at the Comuna 8 in Medellin Colombia that has followed a long process of reconstruction after a major landslide in 1987. The main resilience community aspects created during the reconstruction are unveiled and discussed against the backdrop of the outbreak of civil war in the 1990s, which significantly affected the informal settlements of Medellin.

Following a principle of sequential mix-method research, ethnographic field work was conducted for a period of six months in the community. Focus groups and interviews with residents, local leaders, and the local government were performed, and survey responses were collected. The findings revealed a long history of resilience represented by insurgent movements of space re-construction and territory protection (i.e. attempts of eviction and extreme violence) against the government. These movements gave rise to grassroots places that were built by the community. However, the introduction of a new 'top-down' model of development (social urbanism) applied in urban slums by the local government has halted community actions and the development of future grassroots places. To understand if the community has been disempowered by the government, the two types of interventions in Villatina (i.e. top-down and bottom-up) were compared in order to determine their main differences. The results have revealed that the underlying factors identified in grassroots places were strongly aligned with territory protection, community action and place attachment, which were absent in government top-down places.

These findings can be used to facilitate a discussion on the principles in which the communities interact and create their own built environment. These can then be used in slum upgrading programmes that integrate participatory design strategies. To this end, concepts grounded in planning theories and complementary fields (i.e. sociology and anthropology) were used to help this thesis to find alternative and progressive routes to urban development in these urban informal settlements.

Acknowledgements

This PhD work symbolises a personal journey that started in 2015 amid unforeseen events that, besides testing my own personal beliefs, showed me how to develop the conditions to create resilience after a disaster. This journey has brought the best and most inspiring experiences and showed me that the key to resilience is without the shadow of a doubt the feelings of oneness and cooperation. Those were the feelings that showed me the way to resistance, and faith and that, besides all the psychological pain that one can endure, there is always a doorway to transcendence. That door opened after the fire in 2015 when this PhD journey was only beginning to unfold. And it was there, in the darkest times where I understood the essence of ‘resilience’.

More than acknowledgements, I would like to sincerely express my gratitude to all those people who are and became my guides throughout my quest to understanding the meaning of resilience. My dearest thanks to Professor John Chilton, who has believed and has placed a great deal of trust in me – even in those moments of uncertainty. Special thanks to Dr Peter Rutherford for trusting in me and embarking with me on this challenging journey of conducting research in Medellin informal settlements. I have nothing but gratitude for the long hours of discussion and guidance. My sincere gratitude for the valuable feedback and support to professor Jonathan Hale and Dr Harry Smith. To Michael Kent, my personal tutor, mentor and partner. Your influence helped me to strengthen my path towards commitment, discipline, and love: This thesis is specially dedicated to you: *“Some friends will go, and some will stay, some last a chapter, some a page. For some love comes disguised as lust, but you'll find love when you find trust... Make this the best of the rest of your days, let's start our own revolution and I will see you at the reunion”* (Bon Jovi: Reunion).

To my dear friends Vi Le, Najah, Mina and May, thank you for standing there just right beside me. Thanks for your beautiful light, you have inspired me greatly. To me, this PhD work would have not existed if I had not had the support of my family. Infinite thanks to you Mom, Dad, Juanes, Stefy and Nita – you are the fire that pumps blood into my veins; you are the energy that always shows me the way home.

I would like to thank to all the institutions that funded my studies, field trips and international conferences: Colciencias-Colombia, Newton Funds, Funds for Graduate Women UK, Santander Latino America, and the Society of Latino American Studies UK. Special thanks to the EDU Medellin design team, Ingeniero Mario Lopez, oficina de

planeacion Medellin, professor Francoise Coupe (Unversidad Nacional), Resilience Office Medellin, Dr. Giovanni, Unidad de Victimas Nacional Medellin, oficina Contexto Medellin (Fiscalia), and all the institutions and people in Medellin that helped me to conduct this study.

Finally, my eternal gratitude to all the people in Villatina in the Comuna 8 in Medellin who participated in this study. Thank you for opening you homes and souls and allowing me to be part of your reality. You have shown me the shape of resistance and the path to resilience.

For those people who believe they are voiceless and have been forgotten. For those people who have been victims of the civil war in Colombia and who, although their souls have been wounded, continue to create communities grounded in cooperation and peace. For those people who do not believe in separation. To all of you, I say thanks; you are my source of inspiration and hope for an inclusive co-creative world. *“At the end of the day, we are all part of the same non-local universe, we are all interconnected, we are all part of the same creative energy” (Alan Watts).*
