Citation: Huang Wei Ling, *Can we cure our patients in palliative care?* (2021) *Int J Cancer Res Ther*, 6 (2):29-32.

With the publication of Flexner report in 1910 and implementation in 1913, with the Rockefeller Foundation and Carnegie Foundation behind it, all medical schools on the main continents of the planet (America, Europe, and Asia) had to adapt to follow the new model of a so-called scientific school. Schools that did not meet the Flexner criteria had to be closed, such as those teaching herbal medicine, naturopathy, homeopathy, etc and only 20% of the schools maintain working. The history of medicine in USA was written by King (1984) in the article entitled XX. *The Flexner Report of 1910* [1].

According to the article written by Stahnisch and Verhoef (2012) entitled *The Flexner Report of 1910 and Its Impact on Complementary and Alternative Medicine and Psychiatry in North America in the 20th Century*, Flexner report came to bring the model of modern scientific medicine to challenge the contemporary approaches such as homeopathy, naturopathy, osteopathic, chiropractic, and other eclectic forms of therapy. At that time, he pejoratively attacked as quackery and charlatanism the other forms of psychiatry that was treating patients with bloodletting for example [2].

These changes after Flexner report, brought an incomplete way of seeing the patient, only treating the symptom plus the real cause that led him to get sick was never treated, as current medicine does not know the vital energy, known as prana in Ayurvedic medicine or *Qi* in Chinese medicine [3, 4].

Diagnosis is currently performed very late, as according to the various articles published by the author (2021), one of which is entitled *Energy Alterations and Chakras' Energy Deficiencies and Propensity to SARS-CoV-2 Infection*, she said that the transformation of the patient's health to disease is divided into five phases and of the first three phases is characterized by alterations in internal energy and the patient presents symptoms and does not present alterations at the laboratory or radiological level. This situation is very common, for example, in patients with fibromyalgia. In an article published by the author (2019) entitled *What are the*

Sources of Fibromyalgia and How to treat it Without Using Anti-Inflammatory or Anti-Depressant Drugs? she is showing that patients with fibromyalgia has pain in the body but the laboratorial exams usually are normal. This do not mean that the patient does not have anything. They have alteration in the phase one to three (energy alterations) but the laboratorial exam is normal. The energy imbalances that is leading to the pain formation usually is Blood deficiency [5,6].

The diagnosis in Western medicine is only performed in phase four or five, when there are some laboratory and radiological alteration in phase four. But the changes can be reversible when the patient is diagnosed with cancer, as shown in the author (2020)'s article *The Importance of Treating Energy Imbalances and Chakras Replenishment for Prevention and Treatment of Cancer* [3, 4, 6, 7].

However, according to Western medicine, when patients are already in stage five and cell changes are considered irreversible [3, 4, 6]. At this stage, when there are changes in the laboratorial exams, this means that the patient is already with energy imbalances for many years (5, 10 or even 20 years) before developing the disease [7].

In the 2nd Webinar on Oncology and Cancer Therapy, that was held on March 26, 2021 in London, UK, the author was a speaker, and the title of her presentation was *Chakras' and Energy Deficiencies in the Genesis of Breast Cancer*. The second study presented by her was *Malignant Tumor Regression Balancing Internal Energy and Chakras' Energy Replenishment*. In these presentations, the author said that the population is currently at increased risk for cancer due to the general energy deficiency pattern found in more than 90% of people as published in the article *Energy Alterations and Chakras' Energy Deficiencies and Propensity to SARS-CoV-2 Infection* [5, 8, 9].

This pattern increases the risk of people getting cancer, but if we make an early diagnosis of this energy deficiency and treat it prop-

erly, we will deviate from the path that this patient would follow towards the disease and the patient would have a different life without so much risk of having chronic diseases including cancer. According to traditional Chinese medicine, and also in articles published by the author, the same says that cancer comes from the individual's energy deficiency with the formation of internal Heat [7].

The author usually treats her patients nowadays, replenishing this chakras' energy centers with the use of highly diluted medications, according to the theory she created (2020) entitled *Constitutional homeopathy of the Five Elements Based on Traditional Chinese Medicine*, and also, using this theory, the physician can treat many kinds of diseases that have the same root, that are the energy deficiency. The reason why she is using highly diluted medications to treat this energy deficiency instead of highly concentrated medications is that, according to Arndt Shultz Law, highly concentrated drugs harm health and can lead to death and highly diluted medications improve organic process and increase the vital energy. For this reason, the use of highly diluted medications in cancer patients and in all kinds treatments nowadays, needs to be based on highly diluted medications, due to alterations in the energy patten of human being, as showed in the article *Is the Population in the World the Same as in the Past?* to do no harm even more the vital energy that is already low [7, 9,11].

In her publications, the author follows the teachings of Hippocrates and also of traditional Chinese medicine, always treating all her patients rebalancing their energies, as according to this theory, presented at an Acupuncture Research Conference that was held in 2015, at the faculty of Harvard Medicine in Boston, United States, the author showed that by treating all the energy imbalances that are at the root of the tree, presented in all her articles, it is possible to treat all the patient's problems at the same time, whether emotional or physical, as in the patient she treated in 2006 who had leg pain, and he improved his intraocular pressure with the treatment, even though the author did not know that the patient had glaucoma [12].

Therefore, with regard to patients who have cancer, who are currently in palliative care in Western medicine, they say they have nothing else to do, due to the prospect of looking only at the leaf level of the tree and forgetting that the human being is a being biopsychosocial, inserted in a universe and a society that is all formed by energy, as shown in the Capra (1975) in the book *The Tao of Physics* [13]. He says in this book the duality that exists between the two medicines (Western and Eastern) and the different points of view. While medicine is discussing what is scientific and what is not scientific, who are suffering are our patients, who only under the care of scientific medicine, forgot to treat the real cause of cancer that is at a different level, the root of the tree [7, 13].

The author talks about the cure of cancer in patients who were left aside by Western medicine, as there is still much to work with these patients who are at this stage of disease evolution, but due to failures implemented in the past, with economic intent, to maintain the power over our patients' prescriptions, sometimes we should not judge whether or not the patient has anything else to do, because depending on the doctor's level of knowledge, medicine

can go beyond what is recommended today. In the article *Lives Not Worth Living in Modern Euthanasia Regimes*, written by Kim (2019), the author is saying in this article that there is a judgment of worth of person's life in non-terminally ill persons even when they usually say in the words to "reducing suffering"[14].

Lack of chakras' energy is common in all cancer patients, and in many articles that the author has published recently, talk about the importance of addressing this energy deficiency to prevent metastasis formation or reduce size of tumors and metastasis in this patients [7].

Treating patients only with chemotherapy drugs, radiotherapy and sometimes surgery has followed the way of thinking of Galen (c. 130-200 A.D.) who was a Greek physician who lived 500 years after Hippocrates, and who is most responsible for the current way of thinking in medicine. According to Galen, the patient has an organ that is sick, if we remove this organ, the body becomes health again [15].

But in this case we will only be treating the symptom, which is just the tip of the iceberg, and all the problem that is buried in the ocean floor, which is what is causing the problem and which has not yet been treated, are the characteristics of patients who are in palliative care these days. The author will present this theme in the webinar on Cancer Science that will be held on September 27-28, 2021 in Dubai, UAE entitled *What Can We Do in Patients with Palliative Care that Can Improve Their Quality of Life or Even Cure Them?*[16].

This analogy of treating only the symptoms of patients was presented at the International Conference on Orthopedics & Advanced Care and International Conference on Obesity & Its Treatments that was held in February 25-26, 2019 in Singapore City, Singapore in a study entitled *Why Patients with Knee Pain Still Have Symptoms Despite the Use of Anti-Inflammatory Medications?* In this study, the author demonstrated that patients with knee pain have energy deficiencies in the "root" of the tree, and the energy that commands the knee are related to the second chakra (Kidney) and first chakra (Liver). All these energy disharmonies are under the "ocean" or in the "root" of the tree, that the author presented in many of her articles, showing the necessity to understand this energy flow, to understand in the deepest level, all the functioning of the human being [17].

In her clinical practice, the author has experiences with patients with malignant cancer and who have cured this problem only by making treatment with internal energy rebalancing using Chinese dietary therapy, acupuncture, apex ear bloodletting and chakras' energy replenishment using homeopathic medications, through the theory entitled *Constitutional Homeopathy of the Five Elements based on Traditional Chinese Medicine*. All these tools were considered not scientific by Flexner in the past, as showed in the article *The Flexner Report of 1910 and Its Impact on Complementary and Alternative Medicine and Psychiatry in North America in the 20th Century*, written by Stahnisch and Verhoef (2012). But this is the major difference between the two points of view. As Flexner was an educator, in his studies he focused only on the Western medicine's point of view, but what he saw was not enough to understand how is the entire process that is involved in the formation

of human body, in the energy point of view. According to Hippocrates, "Life is short, art long, opportunity fleeting, experience treacherous, judgment difficult" [2, 10, 17].

Therefore, palliative care patients, as per Western medicine, have nothing else to do. They are those who even taking all possible chemotherapy had the spread of cancer that they are just waiting for the day of death. According to Mahrezi and Mandhari (2016) in the article *Palliative Care: Time for Action*, the authors are saying that one to the goals of palliative care is to provide comfort and relief suffering and pain in this patient [18]. More on the holistic point of view this kinds of patient still have a lot to do, if we see in the energy point of view, and new hopes can be given to this patient [7].

Medical clinic reevaluation measures worldwide must be reevaluated the type of doctor we are training today, as current medicine is teaching a doctor to prescribe medicines that are harming the vital energy of our patients and causing more vital energy deficiency in patients who are already with low vital energy, demonstrated in the article written by the author (2021) entitled *Energy Alterations and Chakras' Energy Deficiencies and Propensity to SARS-CoV-2 Infection* and in the article *Is the Population in the World the Same as in the Past?*[5, 11].

In the article *Energy Alterations and Chakras' Energy Deficiencies and Propensity to SARS-CoV-2 Infection*, the author demonstrated in her study that from 2015 to 2020, analyzing a thousand patient chakras' energy centers, she concluded that more than 90% of her patients were completely deficient in energy in this chakras' energy centers, that corresponds to the energy of the five massive organs in traditional Chinese medicine, which are responsible for the production of *Yin, Yang, Qi* and Blood. These energies are important to maintain health and the imbalance or the deficiency of one or a combination of these deficiency would induce the formation of a variety of diseases, diagnosed in Western medicine in the leaf of the tree, as showed in all her articles [3-7].

The author said in this article that the result found in her clinic may be a reflection and a sample of what could be happening in populations across our planet and in all countries and all continents [5]. This general energy deficiency in all the chakras' energy centers can be caused by chronic exposure to electromagnetic radiation from 5G technology worldwide [5, 19].

The author explains what measures have to be taken when the implementation of these technologies and new studies must be carried out by people who understand the energy part of the human being, and not just the matter, because the part that is most affected today is the energy part, that nowadays is considered "not scientific"[2,5]. The drugs currently recommended for this new type of population are highly diluted ones, such as homeopathies, according to Arndt Shultz Law. In 2020, the author published a new theory of homeopathy whose title is *Constitutional Homeopathy of the Five Elements based on Traditional Chinese Medicine* and according to the author, every individual today should make use of these homeopathies to replenish energy, as due to continuous consumption of our energies by electromagnetic radiation, the human being is always deficient of energy. In this way, the replacement of

this energy would bring the necessary element for a more normal life of the human being today, as it has suffered physical and emotional consequences with these changes, making daily life more difficult and ends up having problems in all areas, consequence of this lack of energy[10,20]. And when the cancer patient is using chemotherapy or radiotherapy and/or surgery, the doctor should also remember to treat the energy deficiencies of all the patients, with homeopathies according to *Constitutional Homeopathy of the Five Elements based on Traditional Chinese Medicine*, replenishing the energy that is very low in all these cancer patients [10].

In this way, patients in palliative care will have more time to survive, with better quality of life and the chance of it being cured or not, will depend on a series of factors that are involved at this time, as it depends on the diet, its balance energy and your emotional state in addition to the spiritual state as well, demonstrated in the article written by Hatamipour et al. (2015) entitled *Spiritual Needs of Cancer Patients: A Qualitative Study*. In this article, the authors are emphasizing that cancer patients have spiritual needs and this aspect should be recognized by medical team [21].
