Preface	xi
1 From Piaget to the Neo-Piagetians	1
Still “Neo-“? 1	
Two Piagets 6	
Piaget as Theorist of Logical Competence 7	
Piaget’s Dialectical View of Development 8	
Problems for the Developmental Theory of Logical Competence 13	
Synchrony and “Horizontal Décalage” 14	
Adults’ Errors of Logic 15	
Precocious Logical Reasoning in Children 16	
Cross-Cultural Differences in Developmental Pathways 17	
Who Killed Genetic Epistemology? 18	
The Evidence 18	
The Verdict 21	
Setting the Stage for Neo-Piagetian Theories 22	
Information Load and Task Complexity 22	
Representation and Its Development 25	
Strategies and Control Processes 29	
On the Dialogue Between Epistemological Traditions 32	
Conclusion 38	
2 The Theory of J. Pascual-Leone	40
Cognitive Development and Cognitive Style 40	
Field Dependence/Independence 40	

Field Dependence and Piagetian Tasks	42
Schemes and Processing Capacity	43
Processing Capacity: Hypotheses Regarding Its Limits and Development	43
Research on the CSM Task	44
Schemes: Definitions and Properties	45
The Components of Schemes	45
The Properties of Schemes	46
Scheme Classification	47
Examples	49
Second Level Operators	50
Learning Effects	51
Attentional Energy	53
The Inhibition of Irrelevant Information	54
Field Effects	57
Automatic Encoding of Space and Time	58
Emotion-Based Activation	59
The TCO and Task Analysis	59
General Characteristics of the TCO	59
Task Analysis	61
A Classical Piagetian Problem: The Control of Variables	63
Task Analysis	63
Experiment	64
Is the Water Level Horizontal?	65
Task Analysis	66
Correlational and Experimental Research	67
A Psycholinguistic Problem: The Comprehension of Metaphors	69
Task Analysis	70
Experimental and Correlational Research	72
Planning and Production of Children's Drawings	73
Drawing a Partial Occlusion: Task Analysis	74
Experimental and Correlational Research	75
Cognitive Development and Motor Ability	77
Rho Task Analysis	78
Research on the Rho Task	79
Research on Inhibitory Processes	81
Comparing Inhibitory Processes Across Tasks	83
Conclusion	86

3 Structuralist Approaches to Developmental Stages

88

Piaget's Structuralist Approach	88
The Concept of Structure	89
Piaget and Structuralism in Psychology	89
A Neo-Piagetian Reformulation of Structuralism	90
The Symbolic Nature of Thought	91
Cognitive Systems	91
Relational Complexity	93

Experiments on the Comprehension of Systems of Rules	94
Conservation and Transitivity Research	97
The Question of Information Load	99
The Problem	99
An Attempted Solution	100
Problems and Prospects	102
An Attempt at a Synthesis of Two Theories	103
Methodological Problems and Theoretical Responses	104
Experimental Studies	105
Structuralist Approaches to Individual Differences	106
Analogical Representations, Concrete Operations and Individual Décalages	107
Studies on Individual Décalages	108
Experiential Structuralism	110
Conclusion	113
4 Problem Solving in Children	115
The Use of Heuristics in the Solution of Well-Defined Problems	116
Heuristics in the Solution of Well-Defined Problems	118
The Use of Heuristics in Children's Problem Solving	119
Problem Solving and Learning by Analogy	125
Children's Understanding of Analogy	130
Advantages and Limitations of the Analogical Procedure in Problem Solving	133
Instruction and Problem Solving	135
Siegler's Model; the Balance Problem	136
The Balance Problem and Training	139
The Role of Instruction in the Use of Analogical Procedures	142
Conclusion	147
5 The Cyclical Nature of Skill Development	148
The Development of Dynamic Skills in the Theory of K. Fischer	149
Methodology	152
Optimal and Functional Level	154
The Cyclical Shape of Development	157
The Structural Levels of Skill: An Example	159
Upper Limit on Skill Level Development	163
Change Processes	165
Transition Processes and Individual Differences	173
Generalization and Specificity	177
Some Methodological Notes on the Epigenetic Approach of Skill Theory	182
Conclusion	188

6	Structures and Processes in Case's Theory of Development	190
	General Characteristics of the Theory <i>191</i>	
	Outlining Cognitive Development in Case's Theory:	
	The Balance Beam Task <i>194</i>	
	The Development of Sensorimotor Control Structures in Infancy (1–18 Months) <i>194</i>	
	The Development of Interrelational Control Structures in Preschoolers (1–5 Years) <i>196</i>	
	Dimensional Control Structures in Middle Childhood (5–11 Years) <i>198</i>	
	The Development of Vectorial Control Structures in Adolescence (11–19 Years) <i>200</i>	
	Processes of Change in Executive Control Structures <i>201</i>	
	Working Memory and Operational Efficiency <i>202</i>	
	Measuring WM: Problems and Solutions <i>203</i>	
	Does Operational Efficiency Play a Role in the Size of WM? <i>204</i>	
	Role of Maturation on WM and Link With Cognitive Development <i>207</i>	
	Central Conceptual Structures and Their Development <i>208</i>	
	Central Numerical Structure: The Development of the “Mental Number Line” <i>210</i>	
	Central Narrative Structure: The Development of “Mental Story Line” <i>215</i>	
	Is There Support for the Existence of CCSs? <i>217</i>	
	Processes of Change in CCS Development and Relationship With ECS <i>220</i>	
	Factors Influencing the Development of Central Conceptual Structures <i>222</i>	
	Role of WM on Central Conceptual Structures <i>222</i>	
	Role of Experience in Development of CCS <i>223</i>	
	Conclusion <i>225</i>	
7	Cognitive Development as Change in Representations	229
	General Changes in Representation: Mounoud's Qualitative Developmental Progression <i>230</i>	
	General Form of Mounoud's Developmental Model <i>231</i>	
	Phases in Mounoud's Developmental Model <i>233</i>	
	Empirical Support for the Model <i>237</i>	
	Specific Changes in Knowledge Representation in A. Karmiloff-Smith <i>239</i>	
	From Procedural Knowledge to the Construction of Theories: The RR Model <i>240</i>	
	Empirical Support for the RR Model <i>243</i>	
	Development: What Is Innate in Karmiloff-Smith's Theory? <i>245</i>	
	Representation and Neuroconstructivism <i>246</i>	

Comparing the Two Theories	250
Change or Enrichment of Children's Theories?	253
Conclusion	257
8 Cognitive Development and Emotional Development	260
Daggers Drawn With Psychoanalytic Accounts	260
Fischer's Oedipus Conflict and the Unconscious	261
Childhood Amnesia	264
Emotions, Skills, Social Roles, and Attachment	267
A Theory of Emotional Development	270
The Emergence of Emotions and Control Structures	270
Appraisals, Moods, and Personality Development	273
The Horizon of Wisdom	276
Conclusion	281
9 Applications	284
Psychometric Applications	284
Educational Applications	288
Curriculum Planning and Individualized Instruction	289
An Example: The Missing Addend Problem	291
Teaching Central Conceptual Structures	293
Other Broad Educational Goals	297
Toward a New Foundation of Cognitive Educational Research?	300
Heuristic Tools for Task Analysis	302
Identifying the Cognitive Units	303
Process Modeling	306
Conclusion	309
10 In Conclusion	310
The Shape of Development	310
The Issue of Generality and Specificity in Stage Development	310
Continuity and Discontinuity in Stage Development	317
Variability in Development	322
U-Shaped Behaviors	323
Variability as a Cue to Multiple Levels of Cognitive Functioning	325
Role of Variability in General Developmental Theories	329
Some Notes on Individual Differences	332
Information Load and Working Memory	336
Models of Working Memory	339
Capacity and Speed	344
Capacity and Its Interaction With Other Constructs	347

Maturation and Environment	347
The Issue of Precocious Abilities	347
Neurological Maturation and Limits of Environmental Influence	351
Summary	359
Toward an Integration	360
Points of Agreement	360
Controversies and Possible Solutions	362
Again on Dialectic	365
Prospects	368
Conclusion	371
References	373
Author Index	413
Subject Index	425

Preface

This book ties together almost four decades of neo-Piagetian research. Neo-Piagetian theorists share many similarities with Piaget—they take a constructivist approach to cognitive development, they are broad in their scope, and they assume that cognitive development can be divided into stages with qualitatively different characteristics. They also assume that the complexity of children’s thinking increases across these stages, but unlike Piaget, they define the complexity of the stages in accordance with features of the child’s information processing system rather than in terms of logical properties. An integration of the various neo-Piagetian theories now seems possible and in this book we outline the directions in which the next generation of researchers might proceed in order to create a unified, general neo-Piagetian theory of cognitive development.

Therefore, the intended audience of this book includes both the present and the next generation of researchers in cognitive development as well as those with broader developmental and educational interests. Our intended audience includes as well all those who study cognitive development from other theoretical points of view and wish to compare the respective perspectives and to enter into a fruitful dialogue about them. Our greatest hope is that the graduate students in developmental programs around the world will find this book emphasizing broad theoretical perspectives a stimulating and useful means for orienting their future research. The book should certainly be valuable for graduate teaching.

The book is focused on both theory and research, and a unique feature is our constant critical analysis and comparison of concepts across theo-

ries. This feature, of course, is a necessary one in view of our desire to work toward an integration of neo-Piagetian approaches.

The neo-Piagetian authors most often cited through the book are Robbie Case, Andreas Demetriou, Kurt Fischer, Graeme Halford, Pierre Mounoud, Juan Pascual-Leone, Anik de Ribaupierre, and Bob Siegler (listed in alphabetic order), and their co-workers. We include in the list Bob Siegler, who likes to call himself an ‘atypical neo-Piagetian’ because he shares only some, not all of the prototypical features of a ‘mainstream neo-Piagetian.’ A few of these researchers (namely, Mounoud, Pascual-Leone, and de Ribaupierre) have worked at Geneva for at least a few years, which is another (albeit less important) origin of the term neo-Piagetian.

Although she does not define herself as neo-Piagetian, we also discuss some work of Annette Karmiloff-Smith—on the contrary, she has expressed serious reservations on the whole neo-Piagetian enterprise. Nevertheless, given the importance of her studies, the close relationship of her epistemological and theoretical tenets with those of the neo-Piagetians, and her Genevan academic roots, we feel the book would be incomplete if we did not discuss her work.

Some theories are presented more extensively in the book than others. This is not intended to diminish the importance of the proposals that are presented more briefly, but only to avoid redundancy on points on which some theories are similar. As well, we discuss numerous studies that are not neo-Piagetian. Human information processing and dynamic systems concepts are among the most important sources neo-Piagetian theory has drawn on in a dialogue that will hopefully continue with theorists based in other conceptual frameworks. We intend this book, among other things, to be an instrument for that dialogue.

The book has 10 chapters. The first section of chapter 1 calls the reader’s attention to the relevance of the topic, while the bulk of the chapter is a historically oriented introduction to the major neo-Piagetian issues. Chapters 2, 3, 5, and 6 discuss some of the main theories or groups of theories. Chapters 4, 7, 8, and 9 are devoted to specific topic areas and their relation to neo-Piagetian research. Chapter 10 presents our conclusions and our views on possibilities for an integrated neo-Piagetian approach to cognitive development.

The order of the chapters is in part chronological and in part content-based. Chapter 2 is devoted to Pascual-Leone’s Theory of Constructive Operators and chapter 3 to the structuralist neo-Piagetian approaches—most notably Halford’s theory, followed by Chapman’s, Demetriou’s, and the work of the so-called “French connection” (Lautrey, de Ribaupierre, and Rieben). The theories of Pascual-Leone and Halford were the first two to come into the world, and for this reason we present them first (even though, as the reader will note, these two theories have been consider-

ably reworked and improved over the years). Consequently, in chapter 2 we also present in some detail several specific lines of research in order to show how the theory ‘works.’ Chapter 4 deals with problem solving and children’s use of heuristics, analogies, and strategies; we consider studies by Siegler, Halford, and Fischer along with several non-Piagetian authors as a means of preparing the ground for chapters 5 and 6. These chapters are devoted to two major neo-Piagetian theories, those of Fischer and Case, respectively. We deemed it appropriate to place these chapters in sequence because the two theories share the assumption of a cyclical recursion in cognitive development. Chapter 7 deals with the role of representation in cognitive development; of course, representation also arises in earlier chapters, but here we focus on theories, such as Mounoud’s and Karmiloff-Smith’s, in which this aspect is more prominent than in others. We also consider here some authors who are more distant from the constructivism that characterizes the Piagetian and neo-Piagetian tradition. Chapter 8 ties together several contributions on the intertwining of emotional and cognitive development; in addition to authors also cited in other parts of the book, we also cover the work of emotion specialists with a neo-Piagetian background, such as Marc Lewis, Michael Mascolo, and Sheldon White and David Pillemer. Chapter 9 deals briefly with some applications of neo-Piagetian theories in the psychometric and educational domains and with task-analytic methods that readers might wish to apply in their own field.

The final chapter presents our evaluation of the neo-Piagetian theories from the point of view of broad theoretical issues of developmental psychology. These issues include the shape of development (continuous or discontinuous? domain-specific or general?), the explanation of variability in development, the modelling of working memory or processing capacity (a very important issue for most of the neo-Piagetian theories), and the influence of innate and maturational components on development. Finally, in the last section of chapter 10, we outline some perspectives for a possible theoretical integration.

Like neo-Piagetian psychology, the writing of this book has been a collective enterprise. Fortunately email makes communication between Italian and Canadian authors easy today, so that in any given moment we could readily give feedback to one another on all parts of the book. We share the responsibility for the entire book, but the various authors had different responsibilities in drafting and revising each chapter. Chapter 1 was written collectively by Morra, Gobbo, Marini, and Sheese. Morra took responsibility for writing chapters 2, 3, 8, and 9, and Gobbo for chapters 4 and 5. Chapters 6 and 7 were written by Gobbo, Marini, and Morra, and chapter 10 by Gobbo and Morra. Sheese revised material throughout the work and took responsibility for its final editing.

We thank the publisher Il Mulino for allowing us to adapt material from an earlier book by Gobbo and Morra, *Lo Sviluppo Mentale: Prospettive Neopiagetiane*. We thank Marco Dondi, Corrado Federici, Marc Lewis, Yukari Okamoto, Marion Porath, Robert Sandieson, and Robert Siegler for reading and giving valuable comments on preliminary versions of some chapters; Janice Johnson and Juan Pascual-Leone for useful and stimulating discussions; Marinella Parisi for trusting so much our work; and our reviewers, including Ellin Scholnick of the University of Maryland. We also thank the support staff of our four departments who were so helpful (thanks in particular to Stefano Andriolo, Valeria Gazzea, Derek Hope, Amanda Noble, Carol Penner, Liliana Piccoli, and Fabio Spinelli). We are also very grateful to our relatives and friends, who accepted so well the amount of time and effort that we devoted to this book.

Regardless of whether you are a novice or an expert in neo-Piagetian studies, we sincerely hope you will find reading the book worthwhile; above all we hope that you will become engaged in fruitful and rewarding dialogue about the issues we discuss.

—Sergio Morra
—Camilla Gobbo
—Zopito Marini
—Ronald Sheese
